The image shows a Visual Studio IDE with a C# project named 'Quizz'. The code in the 'Program.cs' file is as follows:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace Quizz
{
    class Program
    {
        static void Main(string[] args)
        {
            int []array = new int [5];
            Console.WriteLine("Enter the index to reach");
            for (int i = 0; i < 5; i++)
            {
                array[i] = Convert.ToInt32(Console.ReadLine());
            }

            Console.ReadKey();
        }
    }
}
```

The console window shows the program's execution. It prompts the user to "Enter the index to reach". The user has entered '1', which is highlighted in blue. The console output is as follows:

```
Enter the index to reach
1
```
